

RE WEAVE - CREMORNE

SENITHA DE SILVA - REPROGRAMMING DISPOSABILITY

ReWeave Cremorne is a mixed-use urban proposal that transforms Cremorne into a sustainable fashion and innovation precinct. The project focuses on repurposing textile waste into new materials and opportunities, creating a circular economy hub for designers, researchers, and the public. Centered around a reimagined Cremorne Street as a Woonerf, the design integrates green public spaces, mixed-use residential developments, and active recreational zones to enhance urban life. By combining production, education, and community engagement, the project aims to create a vibrant, walkable, and environmentally responsible neighbourhood.
